BEDDING CONSTRUCTION DEFINED

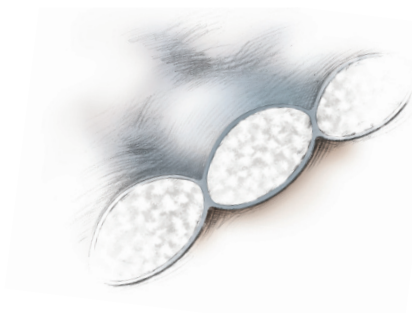

Compartmented Pillow Construction

This style of construction features three unique pockets, using two different types of fill material.

The inner core pocket is designed to hold the firmer fill, while the outer pockets hold the softer fill.

Our compartmented pillow offering is merchandised to give you options in firmness levels and price points.

Sewn Thru Duvet Construction

Sewn Thru Boxstitch construction features boxes that are stitched closed to prevent any shifting of fill material. This results in a tapered edge-to-edge appearance between the stitch lines.

We recommend this construction for the best performance and durability.

Baffle Box Duvet Construction

Each interior seam in a baffle boxstitch construction has a 1" baffle wall, which allows the down to reach its maximum loft.

This construction yields a smoother appearance to the bed.

DECORATIVE PILLOW FILLS DEFINED

White Duck Feather

Our firmest fill. It offers body & support and is the most cost-effective natural fill option.

Luxurelle® Down Alternative

This fill provides our most cost-effective option for polyester forms. The polyester cluster fiber fill is an excellent choice for neckrolls.

50% White Duck Feather/50% Snow White Down™

Yields a plush, soft-density form. It requires routine "fluffing" and is the lightest weight of the natural fill options.

75% White Duck Feather/25% Snow White Down™

This fill offers a softer density pillow when compared to pillows with a higher percentage of feather. Good for throw pillows that can be used for a quick afternoon nap.

90% White Duck Feather/10% Snow White Down™

This is our most popular fill for decorative pillow forms. For designers looking for a pillow that will hold a chop, this is a great option!
